tabularx Testing

This is a test comment, here we want to show $\exists m : \mathbb{N}[Q(m) \rightarrow P(m, 0, 0)]$

The goal is to show the following;

$(\alpha) \quad \forall x \forall y \forall z : \mathbb{N}[P(x, y, z)]$

$(\beta) \quad \exists y : \mathbb{N}[Q(x)]$

Proof:

take arbitrary m_1

take arbitrary m_2

take arbitrary m_3

(1) $m_1 = m_2$

(2) $Q(m_3)$
